

[illegible]

There are three to six sheets showing the average energy spread. Descriptions and heights should be used as a guide only.

All building names, descriptions, number of stories, construction type including roofline details are indicative only and taken extensively from ground level.

All below ground details including drainage, vaults and services have been identified from above ground work and therefore all details relating to these features including: sizes, depth, description etc. will be approximate only. All critical features and connections should be checked and verified prior to starting work.

Detail, services and features may not have been surveyed if obstructed or not reasonably visible at the time of the survey.

Measurements to internal walls are taken to the wall finishes at approx 1 m above the floor level and the wall assumed to be vertical.

Cill heights are measured as floor to the cill and head heights are measured from cill to the top of window.

General

The contractor must check and verify all site and building dimensions, levels, utilities and drainage details and connections prior to commencing work. Any errors or discrepancies must be notified to Survey Solutions immediately.

The accuracy of the digital data is the same as the plotting scale implies. All dimensions are in metres unless otherwise stated.

© Land Survey Solutions Limited holds the copyright to all the information contained within this document and their written consent must be obtained before copying or using the data other than for the purpose it was originally supplied.

1. Ordinance Survey National Grid Coordinates have been established for ST03 using GPS and related to OSTN02(GB) and OSGM02(GB). The grid is related to Goid North with Scale Factor=1.0000.
2. All levels relate to the Ordinance Survey datum for Control Station ST03 established with GPS using OSGM02(GB).
