

AMEX Elite

1 5 D 1 2 0 1 5

Introduction

The Elite range of Amenity Exterior luminaires are supplied with 22W, 28W or 38W lamps and are available with optional integral microwave sensors offering presence detection and bright out function. Corridor function combined with integral microwave sensor allows the luminaire to dim automatically to 10% output during periods of absence therefore extending lamp life and offering a continuous low level of light for security and health and safety purposes. The range is completed with optional three hour integral emergency control gear.

The Amenity Exterior Elite range is ideal for use in corridors, stairwells, exterior applications and any installation where the wide range of cover designs for protective grille and eyelid may be required. Corridor and stairwell areas, where footfall is high and occupancy time is low, are ideally suited to sensor control with corridor function as significant energy savings can be achieved without any compromise to lamp life through repeated striking.

The Amenity Exterior Elite is also offered with all of the benefits of our standard Amenity Exterior range:

- The AMEX is a highly robust aluminium exterior luminaire with a durable opal polycarbonate diffuser, sealed to IP65.
- It is ideal where a durable but aesthetically pleasing solution is required.
- All three styles are available in with either white, black or matt silver body and open, grille or eyelid covers.

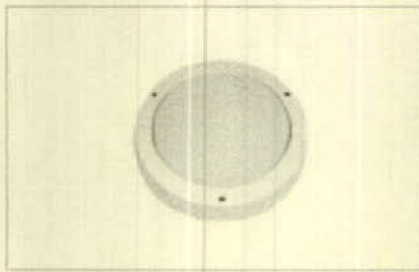

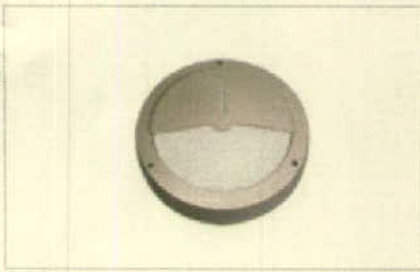

Applications

- Walkways
- Building Exteriors
- Walls
- Under canopy

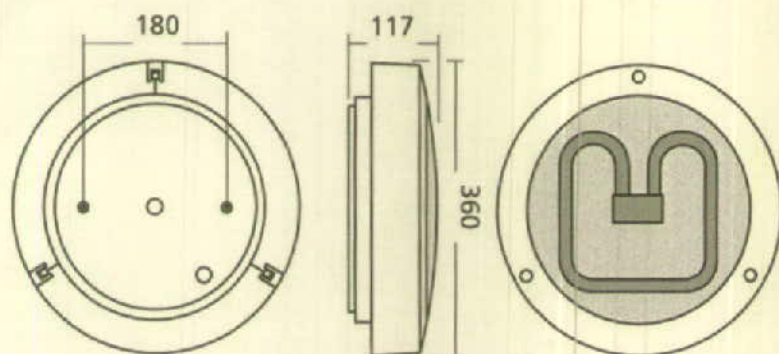

Sensors

- The Dextra Reacta range offers a number of sensor controls from PIR and microwave to daylight regulation and bright-out.
