

13th January 2016

Mr. Ritchie Mellor
ADM Regeneration
Warrington Lane
Lymm
WA13 0SA

Dear Ritchie

Completion Report :- Prescott Road, Liverpool.

I can confirm that Complete Weed Control attended the above site on the 21st, 22nd and 28th September 2015 to supervise the excavation of Japanese Knotweed contaminated soils.

Some of the Knotweed was located on the boundary fence and excavations were restricted to a 1 in 1 batter away from the fence to retain its foundation integrity.

The Knotweed contaminated soils were then excavated and carefully loaded onto half filled dumper trucks then tipped into a previously prepared stockpile area prior to it being removed to a licenced waste tip.

We visited the site again on 27th October 2015 to install a root barrier and the excavation was back filled with clean soils.

All excavations and removal was personally supervised by myself to ensure that all possible Japanese Knotweed rhizomes were removed and further site contamination did not occur.

Upon completion of the removal all the vehicles used were cleaned and all transportation routes were scraped clean.

If you require any further information please do not hesitate to contact me.

Yours sincerely,

Steve Crozier
