Bund creation on Amenity grassland areas:

Infill area (cross hatched area on Page 2):

(Area subject to vegetation cutting / removal and debris search for reptiles prior to works)

Area of dense willow scrub completely covering pond area.

Dried out pond area

Off-site Pond (105m to the south east of site at nearest point)

Area of dense willow scrub completely covering pond area.

Dried out pond area

Off-site extensive habitat mosaic / grassland / scrub / woodland, providing optimum reptile habitats (if present).

Dried out pond area

Dried out pond area

Dried out pond area

However as an absolute precaution and to eliminate risk to any individual reptiles the following course of action is recommended;

- At least one week before the proposed work all areas of vegetation on site will be cut / mown / strimmed to approximately 10cm above ground level. The cuttings / arisings will be removed off site.
- Following the above the piles of debris on site will be removed off site by hand under ecologist supervision.

In the highly unlikely event that reptiles are found all work will stop and further advice will be sought from the acting ecologist.

If you require clarification on any issue, please contact me at the above address.

Yours sincerely

Robert N. Leatham
