

LASER SURVEYS
Laser scanning technology is used to create a 3D point cloud of a site. This data is then processed to create a 2D topographical survey. The survey is then used to create a 3D model of the site. The 3D model is then used to create a 2D topographical survey. The survey is then used to create a 3D model of the site.

NOTES
1. The survey was carried out on 10/10/11.
2. The survey was carried out by the Laser Survey team.
3. The survey was carried out by the Laser Survey team.
4. The survey was carried out by the Laser Survey team.
